RACOR Spin-On Fuel Filter/Water Separators

10 MICRON

For outboard engines, a rugged see-thru bowl lets you visually monitor filter effectiveness. Inboard engine applications require a metal bowl. Accumulated water is easily drained from the collection bowl; when the filter element is replaced, the bowl is reused. The kit includes a new bowl which spins right onto the filter element. All mfg. numbers with "B" as the fourth letter are complete assemblies consisting of spin-on filter element and see-thru or metal bowl.

10 micron filters are recommended for use with E10 (Ethanol) gasoline. Keep spares on board!

M Fuel Filter Funnel

Filters gasoline, diesel, heating oil, kerosene and 2-cycle mixed gas. Removes Water From Fuel! When fuel is poured through the Fuel Filter Funnel, water, dirt and debris will not pass through the filter's fluoropolymer-coated stainless steel filter. Only filtered fuel flows through to your engine, improving its efficiency, durability, and proper operation. The sump area collects the deflected water and debris for easy cleaning and disposal.
