LADDERS

FloatStep™ Floating Dock Ladder

This is an aluminum ladder designed to raise itself out of the water when not in use. The ladder contains a float under the bottom step that automatically pushes the ladder out of the water completely when not in use and comes in a three or four step model. Gone are the days of forgetting to pull the ladder out of the water resulting in barnacles, marine growth and generally unpleasant ladder steps. At the same time, you can be assured that a ladder is always available for someone to use when they are in the water.
